Seat Covers Type

We mainly produce three types of seat covers

ST
Standard

UG
UltraGrip

CS
Comfort System

Produciamo principalmente tre tipi di rivestimenti per selle

Standard Covers

ST

 This is a seat cover, made with high quality non-slip fabrics. It is highly appreciated by bikers who do not have special needs, but who simply want to change the look and increase the grip of the motorcycle seat.

 Questo rivestimento è realizzato con materiali antiscivolo di alta qualità. E' molto apprezzato dagli bikers che non hanno particolari esigenze, ma che vogliono semplicemente aumentare l'aderenza della sella e cambiare il look della moto.

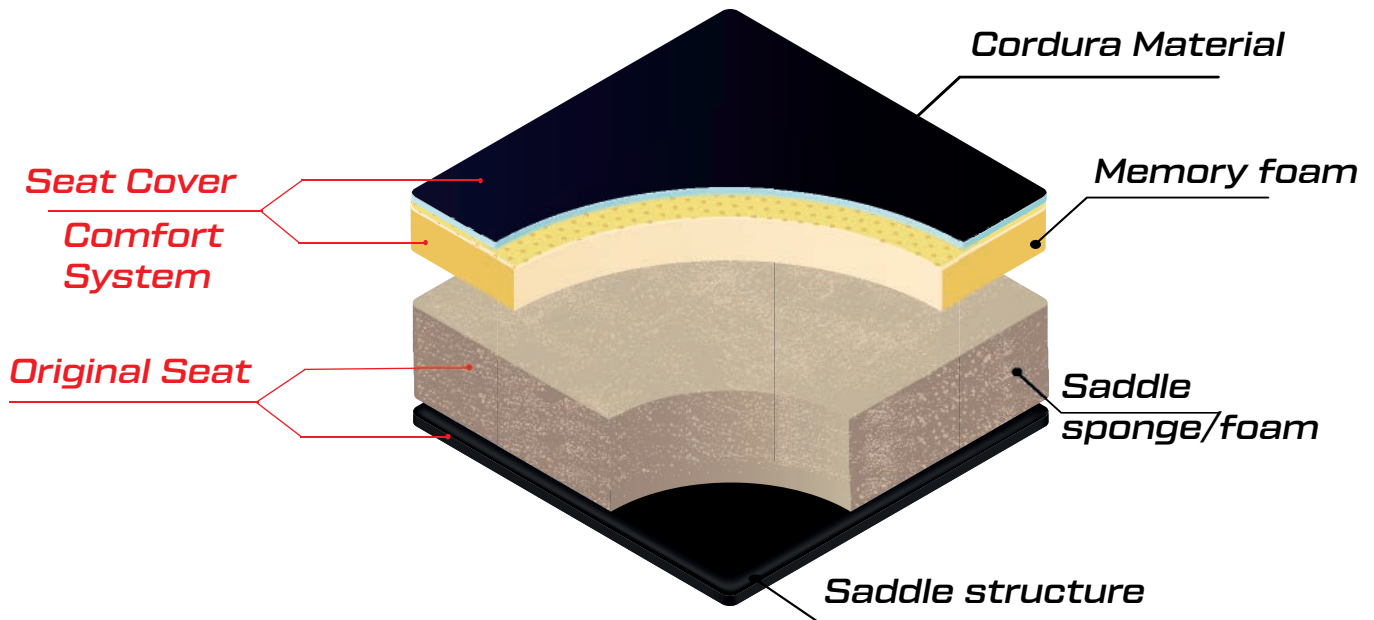

*This is a seat cover made with a particular **ULTRAGRIP** material in the central seat. Tests carried out with various riders have confirmed that this material, which is very rough, significantly increases the grip of the saddle. These types of coatings are extremely suitable for all those Super Sports bikes where the rider needs to have a major grip on the saddle for a better mastery of the bike when leaning.*

*Si tratta di un rivestimento realizzato con un particolare materiale **ULTRA GRIP** sulla seduta centrale. Test realizzati con diversi piloti hanno confermato che questo materiale che si presenta molto ruvido al tatto aumenta notevolmente il grip del pilota sulla sella. Questo tipo di rivestimento viene realizzato in particolare per tutte le moto super sportive dove il pilota ha la necessità di avere una maggiore aderenza alla sella, favorendo una migliore padronanza della moto in piega.*

These coatings use the same materials as the standard versions, but are additionally combined on the inside with a special 2.3 cm **memory foam** latex sponge.

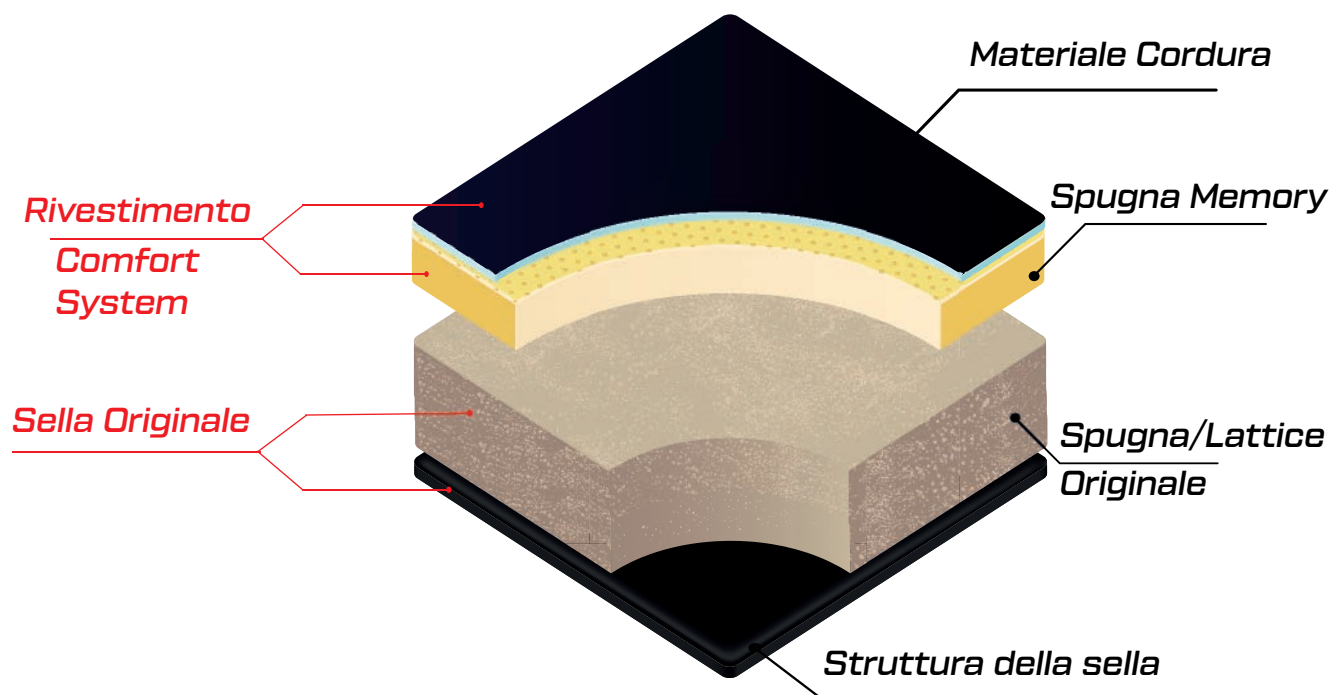

Tappezzeria Italia is the only one in the world to have developed this system, which gives the advantage that in a single product you can have a new and attractive design and at the same time great comfort, this thanks to the **memory foam** placed inside the cover, which transforms the simple seat of the motorcycle into a **“Comfort System”** saddle. The **memory foam** compresses with gradual pressure, transforming the saddle into an ergonomic seat, reducing vibrations and promoting comfort. This coating is very much appreciated by all motorcyclists who travel many kilometers with their motorcycle.

**CS**

Comfort System Covers

Questo rivestimento utilizza gli stessi materiali della versione standard, ma è inoltre combinato all'interno con una speciale spugna in *lattice memory* di 2,3 cm di spessore.

Tappezzeria Italia è l'unica al mondo ad avere sviluppato questo sistema, con il vantaggio che in un unico prodotto si può avere la copertura della propria sella dal design originale ed accattivante ed allo stesso tempo un maggiore comfort grazie allo strato di spugna in *lattice memory* posta all'interno, che trasforma la semplice sella in una "comfort system".

Lo strato di spugna in *lattice memory* infatti con la pressione si comprime gradualmente trasformando la sella in una seduta ergonomica, diminuendo le vibrazioni e favorendo il comfort. Questo tipo di rivestimento risulta particolarmente apprezzato da tutti i motociclisti che percorrono molti chilometri in moto.

...the 125 class with the 250 cc bike.

...the 125 class with the 250 cc bike.

1964

HERO HALLWAY

One of the greatest riders of all times. He overtook the "tripler" position, with knees spayed upwards. The winner of 1965 Tourist Trophy with the 4-cylinder 500.

1970

SUCCESSOR GLORY AND THE END OF AN ERA

Agostini's, and MV's, domination of the world's race tracks lasted well into the 1970's. After the death of Count Domenico in 1971, the company suffered from financial difficulties and internal controversy about what strategy to adopt for the future. On August 29, 1976, the 1976 world champion from Brescia rode a 500 cc MV to his last victory in a Grand Prix. It was MV's last appearance on the top podium. An ailing MV Agusta only limited number of models in racing until the last of the Giacomo Coste...

A close-up photograph of a motorcycle seat, showing the intricate stitching and the texture of the materials. The seat is primarily black with a white woven section and a red leather-like section. The stitching is a vibrant red color, creating a sharp contrast against the dark background. The background is softly blurred, focusing attention on the detailed craftsmanship of the seat.

The production materials are all of Italian or US manufacturing quality. The products are all fireproof class C1 and the seams are all heat taped from the inside, to avoid water infiltration*.

I materiali di produzione che utilizziamo sono tutti di qualità manifatturiera italiana o statunitense, ignifughi classe C1 e le cuciture termonastrate dall'interno, per evitare possibili infiltrazioni d'acqua.*

Quality and safety are important keys for our company. In fact all our materials have high safety characteristics.

Qualità e Sicurezza sono fattori importanti per la nostra azienda. Infatti tutti i nostri materiali presentano elevate caratteristiche di sicurezza.

Safety characteristics
Caratteristiche di sicurezza

made in Italy

Heat taped seams /Cuciture Termonastrate

*However, infiltration may occur if the saddle is exposed to rain for a long time or is exposed to high pressure washing. These possible events, although rare, are not due to a defect of the coating. Optional water-repellent covers are available

*Possono tuttavia verificarsi delle infiltrazioni se la sella viene esposta alla pioggia per lungo periodo oppure al lavaggio ad alta pressione. Questi possibili eventi, se pur rari, non sono da ricondursi ad un difetto di rivestimento. Sono disponibili coperture idrorepellenti opzionali.

Assembly Instructions

This manual is designed to inform the customer about the type of machining required for the assembly of the new coverage. The mounting of the covers is similar for all types of saddles, although the photo of the saddle in this manual does not look like at that request, the assembly system is always the same. We recommend to follow the manual in every part and view the video tutorials on our site or on our youtube channel. If you recognize that the assembly is not within your reach, we recommend rely on a local saddler.

The company declines all responsibility for the covers mounted incorrectly.

Useful information:

The new coating is made of high quality materials and yarns, highly resistant to atmospheric agents. We do not recommend, however, to leave the bike in the sun for long periods and we suggest to cover the saddle during washing, this way it will favor the greater durability of materials and colors. This cover is made with materials suitable for exterior, however a good care of the saddle, will keep the cover always new and with bright colors.

For cleaning the new cover it is recommended to use water and neutral soap, providing to dry the saddle immediately after washing. Velvet effect PVC material, may be a little more delicate than others, if the new coating is made with this material, we recommend that it is not exposed to too much sun, and that it is washed and dried immediately. Even if it is a material suitable for the saddlery, the loss of color and shine could still occur.

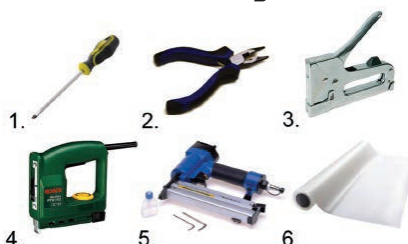

Mounting a cover may take between 15 and 20 minutes, for some covers such as the COMFORT SYSTEM type, the assembly can be much longer and complicated. The assembly phases remain the same, however, in the case of COMFORT SYSTEM covers, we suggest you to contact experienced people immediately.

Warnings:

Before starting the installation work of your cover we invite you to use the necessary precautions, use gloves and glasses for removing pins and be very careful when applying staples with the gun. The company declines all responsibility due to accidents caused during the installation of the product.

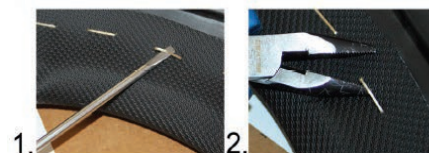

To start the assembly get:

- 1) a screwdriver
- 2) a plier with narrow spouts
- 3) a manual staple gun or
- 4) an electric staple gun or
- 5) a pneumatic staple gun
- 6) protective film (suggested)

Warnings:

Pay close attention to the staple gun, could accidentally cause injuries, we recommend trying to shoot a few staples on a piece of wood before starting assembly. The motorcycles saddles are made with very hard plastics, piercing the plastic can be difficult if you do not have a suitable gun. It is possible to accomplish the work even with a manual gun, but we highly recommend an electric or compressed air gun. It is important also that the pressure of the gun is not excessive, if the pressure is too much it could cause rips on the cover. When you remove the staples of the old cover you have to pay attention to your fingers, loosen the staples(1.) and then remove them with pliers one at a time (2.).

During the assembly you could experience difficulties, lose a lot of time and have a disappointing result, You should follow the instructions step by step and do not the job quickly. It can be useful to watch our video tutorials on our website www.tappezzeriaitalia.it or on our Youtube channel.

Instructions:

After removing all the staples that block the cover of the saddle, you must remove away the old cover.

(Optional) It is suggested to put between the sponge of the saddle and the new cover a protective film that favors the insertion of the new cover and creates a waterproof barrier between sponge and cover.

By adhering the front of the saddle (1), slide the cover with your hands over the saddle, be very careful with the front that adheres well to the corners of the saddle. Accompany the cover towards the rear of the saddle (2) and towards the sides (3). When the cover is well lodged above the saddle you can proceed with locking.

First pull the cover to the bottom of the saddle and nail with the stapler gun the rear locking with 3/4 staples. (4)

Then proceed with the front always pulling well and using 3/4 staples. (5)

Finally proceed with the two sides using 3/4 staples per side pulling towards the outside (6), trying to keep the center aligned to the saddle. At this point the saddle should be locked, you must now check if it is perfectly centered and that it does not have any folds or slow parts. If a further draught of the cover is needed, remove the staples that block the side on which to intervene, and reposition the cover well and then block it again.

Questo manuale è realizzato allo scopo di informare il cliente sul tipo di lavorazione necessaria per l'installazione del nuovo rivestimento. La sostituzione del rivestimento è simile per tutti i tipi di selle, anche se la foto esempio in questo manuale non somiglia a quella richiesta, il sistema di fissaggio è sempre lo stesso. Consigliamo di prendere visione del manuale in ogni sua parte e di visionare i video tutorial sul nostro sito o su youtube. Se si riconosce che il montaggio non è alla vostra portata, si consiglia di affidarsi ad un sellaio della zona.

La ditta declina ogni responsabilità per le coperture montate in maniera non corretta.

Informazioni utili:

Il nuovo rivestimento è stato realizzato con materiali e filati di prima qualità, altamente resistenti agli agenti atmosferici. Sconsigliamo, comunque, di lasciare la moto al sole per lunghi periodi e suggeriamo di coprire la sella durante le fasi di lavaggio, in questo modo si favorirà la maggiore durata dei materiali e dei colori. Questa copertura è realizzata con materiali adatti per esterno, tuttavia una buona cura della sella, permetterà di mantenere la copertura sempre nuova e con colori vivi.

Per la pulizia della nuova copertura si consiglia di utilizzare acqua e sapone neutro, provvedendo ad asciugare la sella subito dopo le fasi di lavaggio. Il materiale PVC effetto Velluto, può risultare un po' più delicato rispetto ad altri, se il nuovo rivestimento è realizzato con questo materiale, consigliamo di fare in modo che non venga esposta troppo al sole, e che venga lavata ed asciugata immediatamente. Si tratta sempre di un materiale adatto alla selleria ma potrebbe comunque verificarsi la perdita di colore e lucentezza.

Il montaggio di una copertura può richiedere tra i 15 e i 20 minuti, per alcune coperture come ad esempio le coperture COMFORT SYSTEM, il montaggio può essere molto più lungo e complicato. Le fasi di assemblaggio restano sempre le stesse tuttavia nel caso di COMFORT SYSTEM, consigliamo sin da subito di rivolgersi a persone esperte.

Avvertenze:

Prima di iniziare il lavoro di montaggio del nuovo rivestimento vi invitiamo a utilizzare le dovute precauzioni. Utilizzate guanti e occhiali per la rimozione delle spille e prestate molta attenzione quando applicate le graffette con la pistola. La ditta declina ogni responsabilità dovuta ad incidenti provocati durante l'installazione del prodotto.

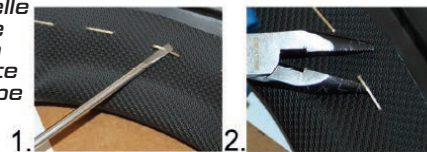

Per iniziare il montaggio procuratevi:

- 1) un cacciavite
- 2) una pinza a becchi stretti
- 3) una graffettatrice manuale o
- 4) una graffettatrice elettrica o
- 5) una graffettatrice pneumatica
- 6) pellicola protettiva (consigliata)

Avvertenze:

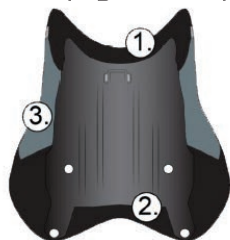

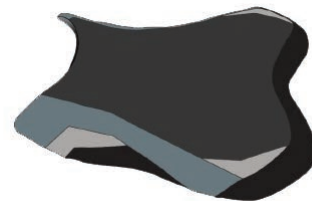

Porre molta attenzione alla graffettatrice, potrebbero causarsi accidentalmente infortuni, si consiglia di provare a sparare qualche graffetta su un pezzo di legno prima di iniziare il montaggio. Le selle delle moto sono realizzate con plastiche molto dure, perforare la plastica può essere difficile se non si dispone di una pistola adeguata. E' possibile realizzare il lavoro anche con una pistola manuale, noi consigliamo una pistola elettrica o ad aria compressa. E' importante inoltre che la pressione della pistola non sia eccessiva, se la pressione è troppa potrebbe causare lo strappo della copertura. Quando si provvede a rimuovere le graffette del vecchio rivestimento bisogna porre molta attenzione alle dita delle mani, allentare le graffette (1.) e toglierle poi con la pinza una alla volta (2.).

In fase di montaggio si potrebbero riscontrare delle difficoltà, perdere molto tempo ed avere un risultato deludente, si consiglia di seguire le istruzioni passo passo e di non fare il lavoro in fretta. Può essere utile visionare i nostri video tutorial sul nostro sito www.tappezzeriaitalia.it o sul nostro canale YouTube.

Istruzioni:

Dopo aver rimosso tutte le graffette che bloccano il rivestimento della sella, bisogna togliere via la vecchia copertura. (Facoltativo) E' consigliato mettere tra la spugna della sella e la nuova copertura una pellicola protettiva che favorisce l'inserimento della nuova copertura e crea una barriera impermeabile tra la spugna e la copertura.

Facendo aderire la parte anteriore della sella (1), fare scivolare con le mani la copertura sopra la sella, fare molta attenzione alla parte anteriore che aderisca bene agli angoli della sella. Accompagnare la copertura verso il posteriore della sella (2) e verso i lati (3). Quando la copertura si trova ben alloggiata sopra la sella è possibile procedere con il bloccaggio.

Come prima cosa tirare la copertura verso il fondo della sella ed inchiodare con la pistola graffettatrice il posteriore bloccandolo con 3/4 graffette. (4)

Procedere poi con la parte anteriore sempre tirando bene ed utilizzando 3/4 graffette. (5)

In ultimo procedere con i due laterali utilizzando 3/4 graffette per lato tirando verso l'esterno (6), cercando di mantenere il centro allineato alla sella. A questo punto la sella dovrebbe essere bloccata, bisogna adesso verificare se sia centrata perfettamente e che non vi siano pieghe o parti lente. Se dovesse essere necessario un ulteriore tiraggio della copertura, rimuovere le graffette che bloccano il lato su cui intervenire e riposizionare bene la copertura e quindi fissarla nuovamente.
